- Full length mill base

DR 1020 MILL FRONT VIEW

- Instant adjustment of roll gap for upper and lower decks at front of mill
- All lubrication points accessible at front of mill Slide gate adjustment for feed rate at front
- Sampling wand mounted on quick snap brackets

Close up of rotary dial for slide gate adjustment

Micro dial adjustment provides precise roll gap control. Each roll deck features one stationary roll and one pivoting roll. All bearings are precision double row self aligning and sealed. Bearing supports, bearing pillows and roll shafts are robust. Mechanical operation of mill is smooth, quiet and cool, not generating and producing damaging heat. Side access ports are supplied for roll inspection and gap measurement.
